

HS002 Pipe Mount Bracket for Momentary Switches

- For B Series momentary switches
- Material: Thermoplastic
- Max. pipe diameter 2.625" / 66.67 mm

CPI's line of HS Series brackets provide easy pipe and tube mounting solutions in a non-corrosive thermoplastic enclosure for our B Series Momentary and K Series Rocker Waterproof Switches (2 or 3 wire versions only - no cable).

Mount one of B Series Momentary Waterproof Switches to a pipe or bar easily with our HS002 bracket. The unique "V-back" design fits pipe diameters of up to 2.625". Two strip ties (supplied) make tightening of the bracket to your surface quick and secure. A simple snap-together feature means you can swap out switches as needed.

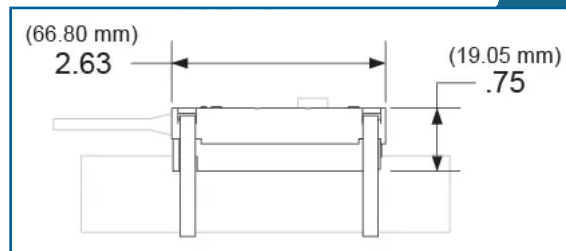

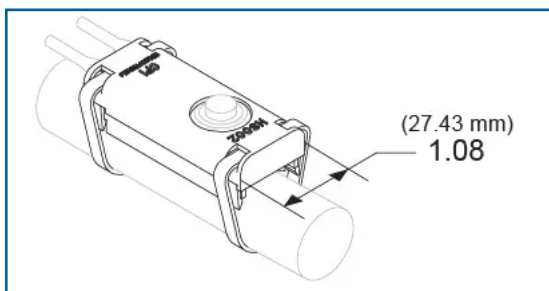

Due to the wire port dimension, HS brackets can be used only with individual lead switches (16AWG or 18AWG).

For mounting of our K1005 or K1007 Maintained Contact Rocker Switches, please see HS001.

Typical Applications

- Construction Equipment Hydraulics
- Momentary Torch Switch
- Liftgate Control
- Pendant Switch
- Marine Switches
- Remote Horn Signal Switch
